

## To whom it may concern

Robust Details Limited has recently approved an amendment to the specification of the separating floor E-FC-14 whereby generic 50mm (min) mineral fibre quilt (min 10kg/m<sup>3</sup>) is specified as the ceiling void insulation in place of the previously stated IsoSonic Ceiling Quilt.

This amendment will be included in the next update to the Robust Details Handbook, but in the meantime, please accept this letter as evidence of Robust Details Limited's approval of the above.

If you have any queries on this, please contact Robust Details Limited by:

Phone on 03300 882 140
